

## Video

If you plan to use video, this is not a lecture that you should record. Please note if you do, video will either be in a tiny window or if displayed larger, it will be choppy.

## Laser pointers

Laser pointers are for local side only. Remember that the far side cannot see your laser pointer. Please use your stylus or mouse to point things out on slides.

## Motion sensitivity

Be aware that your drawing will draw slower on the far end. Confirm with students on far side that they have the completed drawing.

## Echo Cancellation

When farside is heard, the volume goes down on local mics for a second. This is to avoid echoing. Please allow a 1-2 second delay before speaking.

## Farside Volume

Please ensure farside volume is up before starting class

## Slide changing

Avoid fast slide changing. Please allow 2 second pauses minimum between slides
